

- Portable rinsing sprayer for use with clean water to rinse coil cleaner off of coil
- Durable sprayer with optimal 130 psi water pressure
- Removable 4.5 gallon water tank
- Supplied with high capacity rechargeable battery, 12VDC vehicle adapter, battery charger, multiple nozzle options, heavy-duty hose/ sprayer
- Includes eight inch 90° spray wand for cleaning indoor mini-splits
- Includes adjustable shoulder strap for easy mobility
- Optional AC/DC power converter available (4778-12)
- Available separately - 39 inch length 90° spray wand (4778-11)

Application

The Turbo Tank Rinsing Sprayer is a portable tool designed specifically for rinsing air cooled air conditioning coils with clean water after Nu-Calgon coil cleaner has been applied independently to the coil. The Turbo Tank can be used with Bio-Fresh CD, a bacteriostat/fungistat in select applications of indoor coils of ductless systems to aid in inhibiting future growth of microorganisms on the internal surfaces. **The Turbo Tank is not designed for use with any indoor or outdoor coil cleaner; the use of coil cleaners can damage the sprayer and will void warranty of the sprayer – this includes cleaners/ disinfectants such as Nu-Calgon’s Evap-Fresh.**

The Turbo Tank is great for these applications:

- Rinsing ductless wall units
- Rinsing ceiling cassette applications
- Rinsing outdoor coils in remote locations
- De-icing air conditioning/refrigeration components

Water rinse the coil with the Turbo Tank after applying any one of these Nu-Calgon cleaners

Turbo Tank Sprayer

Specifications

Water Pressure: 130 psi
 Volts: 12VDC
 Power: 60 Watts
 Hose Length: 236 inches (six meters)
 Power Cord: 118 inches (three meters)
 Tank Capacity: 4.5 gallons
 Weight (empty): 17.2 lbs.
 Dimensions: 14 x 9 x 21 inches

Packaging

Turbo Tank Sprayer **4778-0**

Operation Instructions

For complete details of assembly, operating, usage and care instructions of the Turbo Tank Rinsing Sprayer, consult the instruction insert that accompanies the sprayer. The instruction insert can also be downloaded at www.nucalgon.com. Please read and understand these instructions before using the product.

Assembly: Using the supplied 115VAC charger, fully charge the battery for eight hours before its first use. Separate the water tank from the power base by rotating the tank counterclockwise, remove the tank cap and fill with clean water. If warm water is used, the maximum temperature for use is 100°F. (Important: Do NOT add any coil cleaner to the water in the tank.) Cap tank and reconnect the water tank to the power base. Select the desired nozzle or spray wand for the application.

Operation: The Turbo Tank can be powered during its operation in one of three ways:

- **For 12VDC vehicle adapter use:** Connect to vehicle's 12VDC power port. Turn unit on to "II" position also noted as "Cig Ltr" on sprayer.
- **For battery:** Charge battery and turn unit on to "I" position also noted as "Battery" on sprayer.
- **For optional AC/DC power converter:** Plug converter into 115VAC power source at the jobsite and plug 12VDC adapter of sprayer into converter's DC adapter. Turn unit on to "II" position also noted as "Cig Ltr" on sprayer.

Always wear productive eyewear and gloves when rinsing coil cleaner with the sprayer. Purge the hose of air by running the Turbo Tank Rinsing Sprayer for 30 seconds or until a steady stream of water is present; then proceed to rinse to coil. Depending on the condition of the battery, it will typically operate the sprayer for 30-40 minutes. The optional AC/DC power converter (4778-12) is a recommended accessory to always ensure power to the Turbo Tank Rinsing Sprayer at the jobsite when multiple cleanings are anticipated.

The device is equipped with an automatic shutoff that de-energizes the motor when the trigger is not being pressed by the operator. **Shutting down the sprayer:** Turn the switch to the "OFF" position. Pull the trigger on spray gun to relieve any water pressure in the hose and spray gun. Always turn the Turbo Tank sprayer to the "OFF" position during transport between jobsites.

Maintenance

Warning: Always disconnect the plug from the power supply before performing any maintenance.

- **Water Filter:** Inspect the water filter screen before filling with water. Clean the water filter screen when necessary.
- **Clogged Nozzle:** A clogged nozzle will cause the operating pressure to be too high, causing the Turbo Tank to surge. If this happens, turn power off to sprayer, pull trigger on spray handle to relieve pressure and remove nozzle or spray wand. Flush nozzle/wand orifice backwards with compressed air and reassemble into sprayer gun.

Storage: The Turbo Tank sprayer needs be stored in such a way to protect from freezing. Do not store outdoors or in areas where the temperature falls below 32°F. Failure to remove water from sprayer in freezing conditions can damage the product and void warranty. Consult the instruction manual for other provisions on how to winterize the sprayer if it must be stored in a freezing condition.

For storage purposes, always turn Turbo Tank to "OFF" position, and squeeze the trigger of the spray gun to relieve pressure within the sprayer and drain the tank.

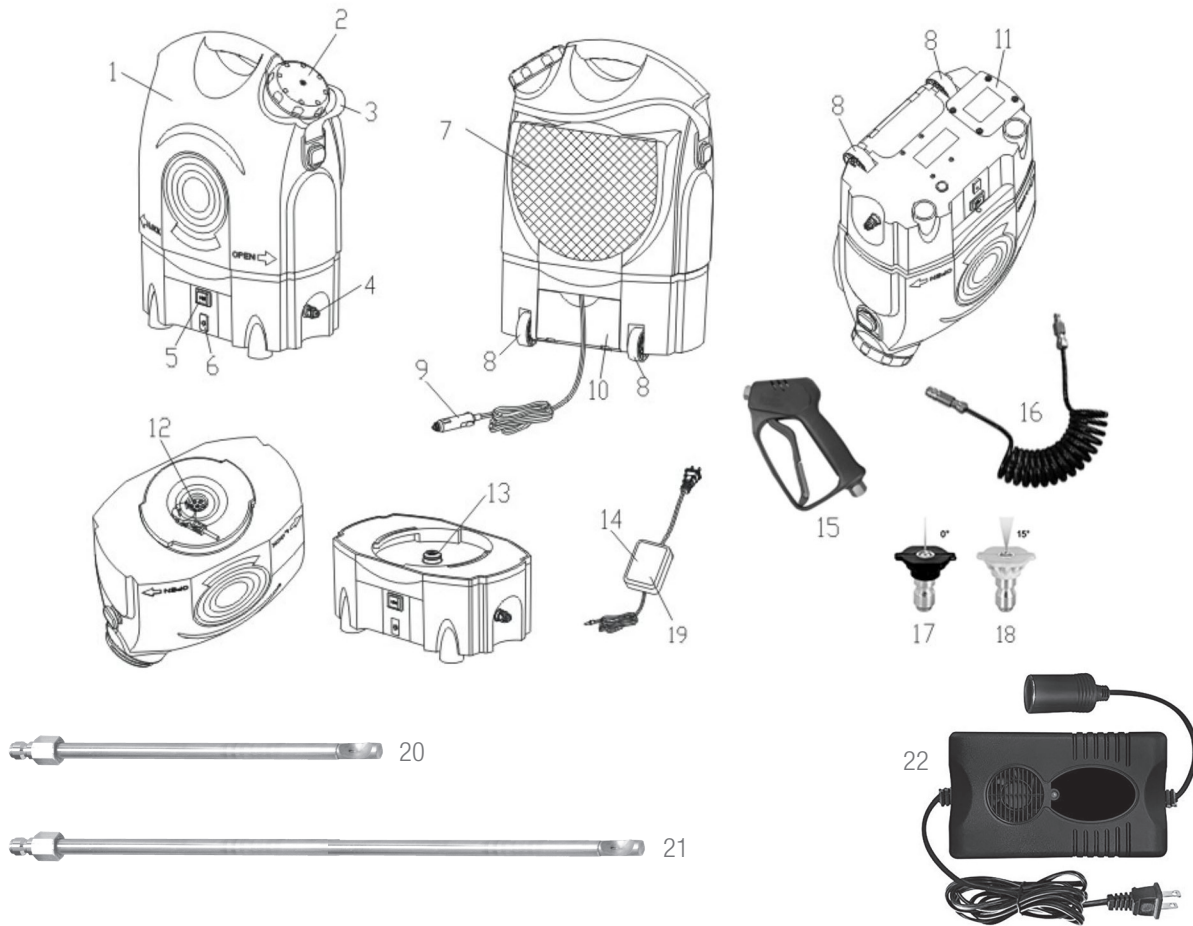

Warranty and Repair

Nu-Calgon will warrant the product for a period of 12 months from the date of purchase to be free of defects in material or workmanship. Keep your original sales invoice to validate the warranty period.

If the product should become defective within the warranty period, we will repair or replace any defective parts free of charge. **Return the sprayer to a Nu-Calgon authorized wholesaler to initiate the process of repairing or replacing the defective part. If necessary, the Turbo Tank can easily be remedied in the field with a replacement part – do not send back to Nu-Calgon without prior authorization.**

The warranty does not include the rechargeable battery, usual wear and tear, damage resulting from accident or unreasonable use of the product, unauthorized repairs or parts that do not belong to the product. The Turbo Tank is designed for clean water only. The use of any coil cleaner will void warranty, since it can damage the wetted parts of the sprayer.

Features and Parts List of Turbo Tank Rinsing Sprayer

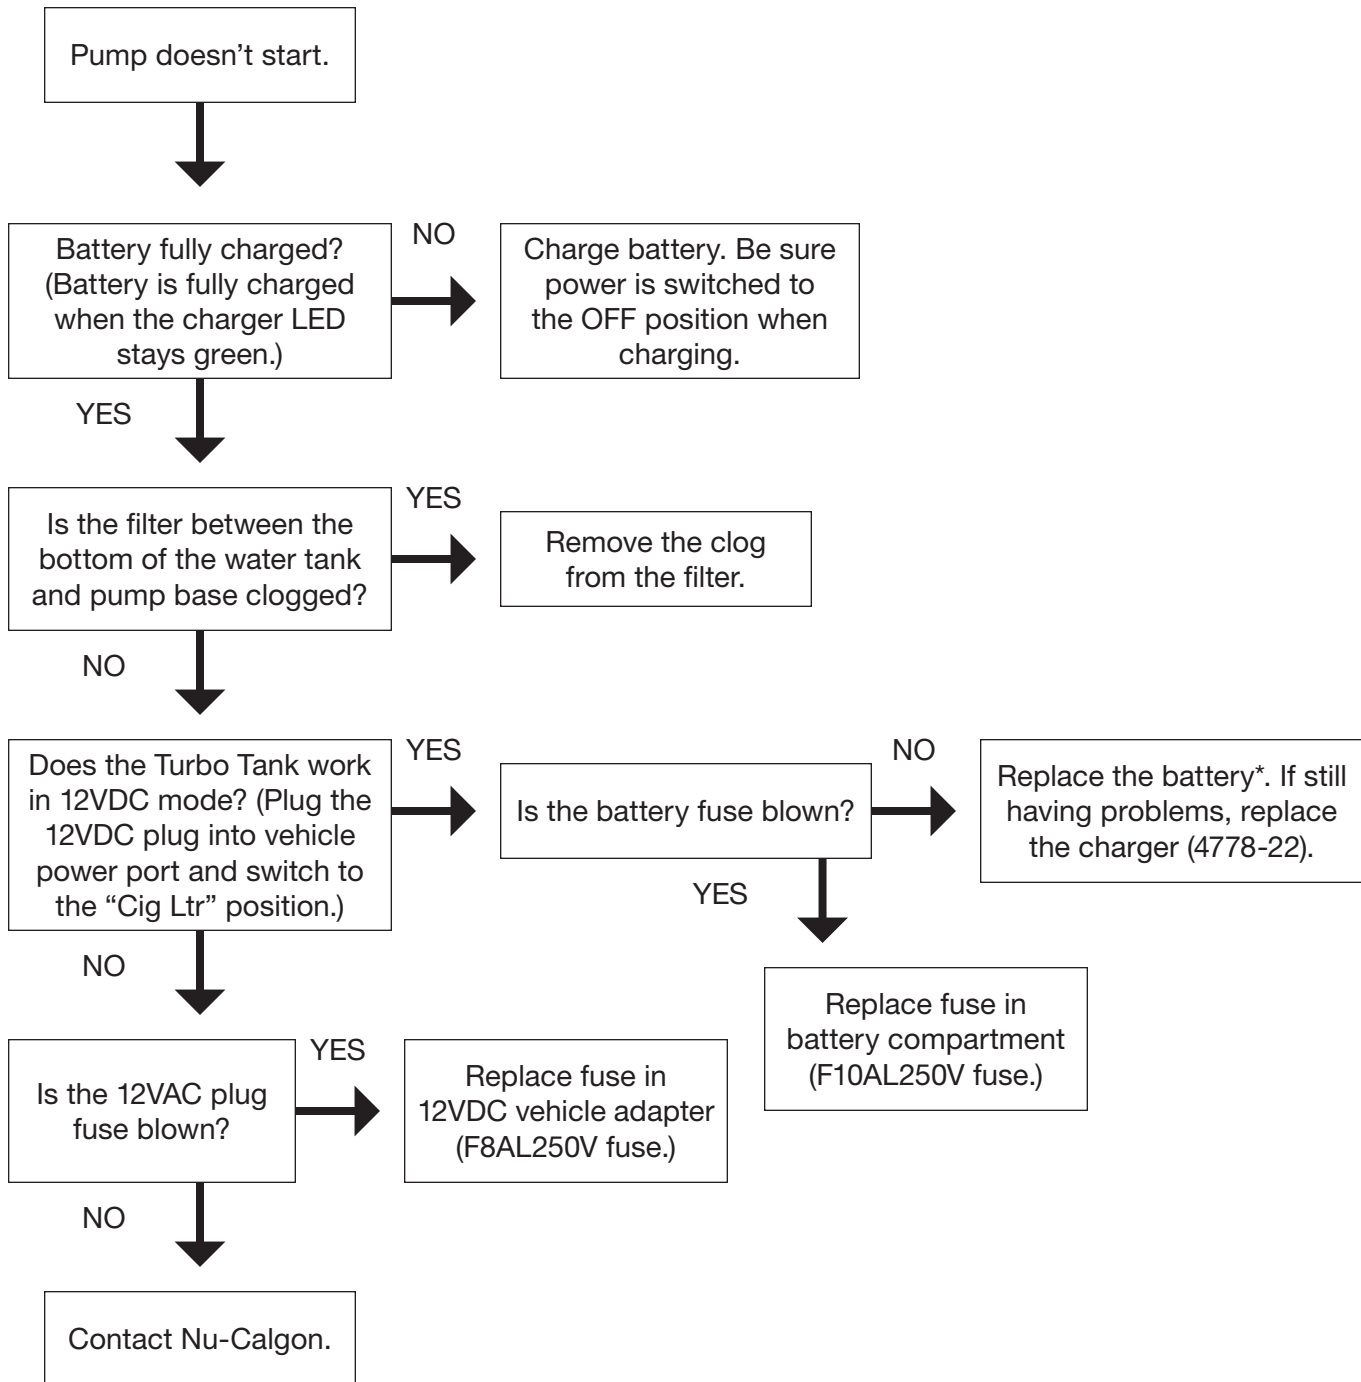

- | | |
|------------------------------|--|
| 1. Water Tank | 13. Water Inlet |
| 2. Vented Cap (4778-15) | 14. Charger (4778-22) |
| 3. Adjustable Shoulder Strap | 15. Commercial Spray Gun (4778-21) |
| 4. Brass Nipple Valve | 16. Self-Recoil Hose (4778-20) |
| 5. Power Switch | 17. Red Straight Nozzle (4778-13) |
| 6. Inlet for Charger | 18. Yellow 15 Degree Nozzle (4778-14) |
| 7. Mesh Storage Compartment | 19. Indicator (Turns from RED TO GREEN when battery is fully charged) |
| 8. Wheels | 20. Mini-Split 90° Spray Wand (4778-10) |
| 9. Power Cord | 21. 39 inch 90° Spray Wand - available separately (4778-11) |
| 10. Cover for Power Cord | 22. 115VAC to 12VDC Converter - available separately (4778-12) |
| 11. Cover for Battery | |
| 12. Water Outlet | |

Note: Sprayer uses a standard Expert Power EXP 1245, 12VDC 4.5Ah rechargeable battery - a product that is readily available in the market.

Contact Nu-Calgon with questions, but could be purchased through Nu-Calgon p/n: 4778-25.
