

AIR-DUCTORS
(30 to 125 psig Air)
To Entrain Atmospheric Air
for Delivery at 1 psig or Less

MODEL: 4201 - AD

Revision: 0

BULLETIN
4201, 4211

DESCRIPTION

Air-Ductors are useful for supplying large volumes of air at pressures of 1 psig or less when high-pressure air is available at steady pressure. Because Hi-Pressure Air is relatively costly, it usually is less expensive to use a blower if the air requirements are continuous. However, for occasional use or where excess compressed air is already available, Air-Ductors are initially less costly and very easy to install.

The Selection Table shows the approximate volume of low-pressure air (1 psig) that various sizes of Air-Ductors will deliver. It also shows the high-pressure air orifice size to be used with various inlet air pressures. When operating at capacities shown and 1 psig delivery pressure, about 25 - 35% of the total delivered air will be high-pressure air (measured on a free basis). See pages

2 and 3 for capacity of high-pressure air orifices. At lower delivery pressures, the ratio of high-pressure air will be less than indicated above.

Air-Ductors are particularly useful for supplying the combustion air requirements of a single Flomixer or group of burners. No valves or blast gates should be used between the Air-Ductor and the Mixer or Mixers it is supplying. If volume controls, either manual or automatic, are required, they should be placed in the high-pressure air supply.

Air-Ductor Assemblies include Hijector, valve, gauge (0 - 30 psig standard), and expanding coupling on outlet end of Hijector, which determines the outlet pipe size to use.

SELECTION TABLE

Catalog Numbers		Approximate Delivery Capacity @ 1 psig Pressure Cubic Feet/Hour	Pipe Size Discharge	Suggested Hi-Pressure Air Orifice (Drill Size) For Various Air Gauge Pressures - psig *						
With Needle Valve	Without Needle Valve			30	50	70	80	90	100	125

* Note 1. For higher discharge pressures enlarge orifice slightly. For lower discharge pressures, reduce orifice size or reduce inlet pressure.

* Note 2. See orifice capacity tables on pages 2 and 3 to determine quantity of high pressure air required per minute for orifice indicated.

CAUTION: Operation of combustion equipment can be hazardous resulting in bodily injury or equipment damage. Each burner should be supervised by a combustion safeguard and only qualified personnel should install, make system adjustments and perform any required service.

ORDERING INFORMATION

Please include the following information for each size Air-Ductor ordered:

1. Number required.
2. Catalog number complete, showing whether type AD or ADC and orifice size.

3. Specify gauge range or maximum air pressure used.
4. List additional parts required by catalog number.
Each order should also indicate shipping instructions.

If in doubt about Air-Ductor selection, send complete information about application so we may assist you.

CAUTION: Operation of combustion equipment can be hazardous resulting in bodily injury or equipment damage. Each burner should be supervised by a combustion safeguard and only qualified personnel should install, make system adjustments and perform any required service.
